

VEGA Client Software

The VEGA client is the software that resides on the technician's workstation, creating secure connections between the workstation and managed devices. The graphical user interface provides a complete overview of all devices an end user is authorized to access. Device connectivity is provided via a point-and-click interface. The client automatically launches the appropriate application to be used with the managed device, limited to the end user's group policy. Each user can create a list of frequently used commands.

Key VEGA Client Features:

- RSA PKE (1024/2048 bit) Encryption
- Advance PKE Generator
- "Private" untraceable IP addresses
- Automatic launch of management application
- Advanced terminal emulator

System Requirements:

Processor

Minimum Any Pentium®-class processor
